

I have been an avid listener to XM Satellite Radio for well over a year now. The recent additions of local traffic and weather channels have proven to be an invaluable tool for me. I have been distressed to learn that the NAB seeks to have the FCC limit this important satellite radio offering through petition 04-160. I urge and demand the FCC to reject the NAB's petition. In my opinion, XM Radio offers a far superior product to broadcast radio. By seeking to limit XM's offerings, the NAB is merely exploring an easy way out of simply improving their product. In such a circumstance, consumers lose. It is anti-competitive, unfair and un-American to limit the offerings of XM Satellite Radio. Again, please reject Petition 04-160.
